

Drive silently...
...with a BMW i3!

Environmentally friendly without compromise.

100 % electric. 0 % emissions.

By selecting a BMW i3, you're causing zero emissions. And it's not only when you're driving that you're being environmentally friendly - the production of the BMW i3 produces lower emissions than that of other cars, the car has an efficient lightweight construction and it's built using environmentally friendly materials. Experience both driving pleasure and a clean conscience with DriveNow and BMW i3!

**Streamlined and smooth =
The perfect city car.**

The BMW i3 is imaginatively designed and perfect for doing everything required of a good city car. Long wheelbase, small turning circle, low centre of gravity. The BMW i3 provides a go kart-feeling and offers a generous amount of space for both the driver and the passengers. Because it's so smooth and compact, it's great in city traffic. Accelerate and brake smoothly with a single pedal. Get ready for an electric experience now!

Dynamic. Silent. Fully equipped driving.

Get started today and enjoy!

The fully electric BMW i3: has eDrive technology, which provides a dynamic and powerful experience. The models in the DriveNow fleet are fully equipped: four seats, five doors, reversing alarm, cruise control, parking assistance, reversing camera, automatic climate control and many more innovative features.

Charging the BMW i3.

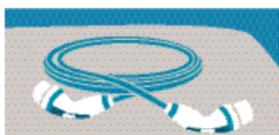

If the car has a range of less than 30 km, please help us recharge the car. The easiest way you can do this is by driving to a charging station, plugging in the charging cable and finishing the booking. In return, we'll load 20 bonus minutes onto your account!

Important to remember: If the BMW i3 has a range of less than 15 km remaining, you should terminate your rental yield by driving the car to a charging station and plugging in the charging cable.

Remove the charging card from the armrest and unlock the charging post

Turn off the engine and select „Park and charge“ or „Finish booking and charge“. Use the charging card in the armrest to unlock the charging post.

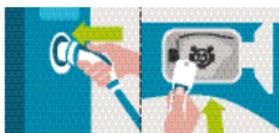

The charging cable is located on the charging post

Use the cable on the charging post to recharge the car. First, take the cable labelled „50 DC“.

Plug the cable into the car

A flashing blue LED light indicates that the car is charging. If the LED light is not flashing, carefully remove the socket and try to connect it again.

Finish your booking

To end the booking, put the card back in the armrest and lock the car as usual via the app or your customer card. In return, we'll load 20 bonus minutes onto your account!

Unplug the cable

If you come to a car where the cable is still plugged in, you can easily remove it. When you unlock the car, the socket is also unlocked automatically. Put the cable back onto the charging post and you're ready to drive away.
